

THE COMMON LOT. BY MONTGOMERY. Once in the flight of ages past There lived a man-and who was he? Mortal! howe'er thy lot be cast, That man resembles thee!

Unknown the regions of his birth, The land in which he died unknow, His name hath perished from the earth, This truth survives alone-

That joy, and grief, and hope, and fear, Alternate triumph'd in his breast: His bliss and woe, a smile, a tear! Oblivion hides the rest.

The bounding pulse, the languid limb, The changing spirits rise and fall, We know that these were felt by him, For these are felt by all.

He suffered-but his pangs are o'er, Enjoyed-but his delights are fled, Had friends-his friends are now no more, And foes-his foes are dead.

He loved-but whom he loved, the grave Hath lost in its unconscious womb; O she was fair! but nought could save Her beauty from the tomb.

The rolling seasons day and night, Sun, moon and stars, the earth and main, Ere while his portion, life and light, To him exist in vain.

He saw -- whatever thou hast seen, Encounter'd all that troubles thee, He was--whatever thou hast been, He is-what thou shalt be!

The clouds and sunbeams o'er his eye That once their shade and glory drew, Have left in yonder silent sky, No vestige where they flew!

The annals of the human race, Their ruin since the world began, Of him afford no other trace Than this-there liv'd a wan.

From the Knickerbocker. "TIME STILL MOVES ON." Time still moves on, with noiseless pace, And we are loiterers by the way: And many lose the race, For which they struggle, day by day; And even when the goal is gained, How seldom worth the toil it seems! How lightly valued when obtained, The prize that Hope esteems!

Outuntestve to the winds of chance, We toss on life's inconsistant sea; w may our bark adva And that may leave it on the lee: This coast, which rises fair to view, May thick be set with rocky mail, And that, which beetles o'er the blue, Be safest for the shattered sail.

The cloud, that like a little hand, Slow lingers when the morning shines, Expands its volumes o'er the land, Dark as a forest-sea of pines; While that which cast a vapory screen Before the azure realm of day, Rol's upwards from the lowland scene, And from the mountain tops away.

Oh, fond deceit! to think the flight Of time will lead to pleasures strange, And ever bring some new delight, To minds that strive and sigh for change. Within ourselves the secret lies, Let seasons vary as they will; Our hearts would murmur tho' our skies Were bright as those of Eden still!

AGRICULTURAL.

From the Southern Planters.

ON THE CULTURE OF COTTON. Many who cultivate this most valuable article, are I find, wrapped in darkness respecting the management of it. Many who cultivate this valuable plant, manage the planting and tilling in such a manner as will not net them any thing; whilst there are others within my knowledge, who sink money at the bu-siness. But when rightly managed, it is cer-

tainly a lucrative crop.

In making the cotton ridges, it is of vital importance to plough deep, and throw the furrows up close, and the ridges should be made early, in order that they may settle before planting. I have seen many farmers who have lost greatly by not setting their ploughs to work early in the season. Procrastination is the cause of failure in many instances, but in none

more surely than in this.

If the ridges are not well settled when the seed is put in, the farmer will either have to plough it up again, or replant. The former will throw him very much behindhand in planting, and the cotton, unless it is very much fawored in the fall with a late season, will not mature before it is nipped by the frost; the inevitable consequence will be considerable loss. As to the latter, reason itself teaches that the older will shade that which is re-plant-

scraped; not a particle of the ridge should be ing is not practised, more or less will be in literally lost by this one peice of negligence; a fair one. You will, therefore, permit me, tutt of grass among the cotton, and before it propriety of not earthing potatoes, though is time to work it again, the grass is towering the observance of hilling can well be dispenabove the cotton; consequently the cotton is materially damaged. The next thing to be done to cotton after scraping all know to be moulding and hilling. The best plan, I find, is not to have a high ridge; it is not only more apt to retain its shape, but grows larger. I have seen some farmers hill their cotton so high that it would be equal to a potatoe ridge; consequently when there comes a rain, which is most commonly needed in the summer, the tude whenever you approach them. Animals

ry large, for whenever the ploughs are stopped be annihilated by their cross keeper: who, the cotton ceases to grow. I recommend topping in August, when cotton is large.

A COTTON PLANTER

From the Genesse Farmer. PROPER SEASON TO CUT TIMBER.

Mr. Tucker: - I will suggest a few thoughts and facts, which have come under my obser- had rendered them as wild as partridges, and vation, concerning the proper season of the cross as catamounts. year in which our building and fencing timber should be cut for profit and durability. Our ideas are derived, many times, from the tradition of others; and I perceive that the same powerful tradition that I have received of my father and aged friends, is abroad in the world, i. e. that timber, in order to be lasting, should be cut in the month of February; and in fact, so particularly have I, and many others of my acquaintance been, that we have cut almost all our rail timber in that season of the year; and if we were under the necessity of cutting a little at any other time, we considered it a misfortune, and cut as little as possible, thinking that it would soon rot. But facts have proved to my satisfaction the contrary. I came into this country early in the spring of 1810, and commenced on the farm on which I now live, the first of April following. On Monday we cut an opening behind them, and being accustomed to the on which to build our shauty. On Tuesday we cut poles and built us a shanty, and myself and two others took our provisions to said shanty the next day, and commenced chopping. We cut our rail timber as we found it when chopping, supposing however that it would not last long, but we could do no better. But to my great surprise, that timber has lasted beyond all calculation, being some of it sound yet; and in fact there were two poles taken from that shanty, (for we built another better one the same spring,) which happened to be saved and laid on the fence, about five inches in diameter, completely sound, yet one of them is a red elm, which lies on the fence to be seen now, and the other is a white ash, which I cut up into blocks and put under the corners of the fence when I moved it two or three years past. It cut as sound apparently as if it had not been more than four or five years since it was cut in the five years. woods. It is twenty-eight years this present month since these poles were cut. Who can state and prove facts equal to these respectwoods. It is twenty-eight years this present ing timber that was cut in February? (You bedsteads wainscotting, &c. where these odious inwill remember that I published an account of the largest elder tree that has ever been given in the Farmer it being 16 1-2 feet high, 16 feet 4 inches horizontally through the top and when the solution is clear, add sixty drops infusion 2 feet 6 inches from the body, 4 feet 6 inches of nut galls, made by pouring one gill of boiling water on two drams of powdered galls. The wash. from the ground.) I have observed and am able to show, that those rails that I cut and split in February rot soon, while those that I the linen before you write it. have ventured to cut in the spring or summer, when the bark would peel off, have remained heavy and sound much longer-tradition is to proof spirits, warm it over coals, but not to blazethe contrary notwithstanding. I, therefore, think that timber will last much longer, cut when the sap runs freely, especially if the bark is stripped off, because in this case all of the sap runs out, while that which is cut when the sap does not run, retains all of the sap, which hastens its destruction. Further I think timber to be durable should by all means be cut when the bark will peel, and do not ne- it will extract the heat.

t, and then you will know for yourselves. RUSSEL WEAVER. Cambria, Niagara C,. April 22, 1838.

From the Cultivator.

ON HILLING PLANTS.

Mr. Tucker:-I have seen in the columns of the Farmer, and the Cultivator, considerable written on the subject of hilling plants, particularly potatoes and corn, and the conclusion to which the writers have generally arrived, seems to have been that the practice was injudicious, and should be abandoned:
To this conclusion I give my assent, so far
General Assortment of British and American as corn is concerned; as from the nature of the system of roots, and the manner in which the braces are thrown out, it is clear that hilling, by covering the first crop of these upper roots, and starting new ones, exhausts the plant needlessly, as but one set of brace roots are essential plants. But unless I am much mistaken, the case is different with the potatoe. In this plant, as every one who has paid attention to it knows the tuber or the valuable part, does not grow on the root proper, but on shoots protruded from the stalk of the plant beneath the surface of the earth. To produce good potatoes, and a large crop, the putting forth of these shoots should be encouraged as much as possible; and no way seems so likely to produce this effect, as providing a supply of light fresh earth around the stem, and renewing it as occasion may require. In my opinion, the experience of our potatoe growers is in accordance with these facts; certainly, my own would go most conclusively to show that the more ample the supply of light, rich, penetrable earth, furnished the plants, the better usually would be the crop But it also follows, from my view of the matter, that the greatest care should be exercised, not to disturb any of the first formed shoots, by subsequent earthing; a point to which too little ed, and deprive it of its due and necessary attention is paid in ploughing and hoeing share of warmth and nourishment. There this plant. I have noticed that in potatoe should be a very small furrow run on the ridge plants grown in hard land, or that were not to plant in, and a very light harrow to cover it properly hoed and furnished with a supply

The director or overseer should be present out of the ground, and exposed to the air in most of his time, to see that the ridge is well growing, is good for nothing; and where hillthey would suffer the workers to leave a small for the reasons given above, to question the

> From the New England Farmer. TREATMENT OF ANIMALS.

Keep up such a source of social and friendintercourse with the tenants of your stable, barn yards, and even your pig sty, that they may be as tame as kittens, and prick up their ears and wag their tails with joy and gratiwater runs directly to the middle, without pen- will not thrive even on custard and apple pie etrating the ridge.

Ploughs should be kept going until it is veand trembling, expecting every moment to if they must eat their allowance with fear we are sorry to say, is sometimes more of a brute than any quadruped under his care.-Besides, if any of your stock should be sick or lame, and need doctoring, you can better handle, and give them their prescriptions, if they are accustomed to kind and familiar treatment, than if harshness and bad usage

> MODE OF BREAKING STEERS IN A FEW DAYS.

Let the farmer carefully yoke his steers in a close vard or stable, and not move them till they get sufficiently accustomed to the yoke, so that they will eat their food, when voked, which will be in the course of a day. Let them be yoked again the second day, and a pair of gentle horses or oxen be fastened before them, in which station let them stand until they become familiar with said horses or oxen, which will be generally effected in one day, excepting the steers should be uncommonly wild, which will occasion a second day's practice after the same manner; and next day the steers may be yoked, the horses or oxen put before as usual, and let them be fastened to a wagon or any other carriage old oxen before, will proceed forward without being whipped or bruised. By the above process, the farmer will never fail of success in having good working oxen .- New En-

A CHEAP MANURE FOR CORN.

Plough up your ground intended for corn as early as you can plough it, when the frost is entirely out of the ground. Take of slaked ashes, two-thirds, and of ground plaster one third; mix them well together and follow the droppers, and put as much of this mixture on the seeds as you can grasp in your

sects usually resort, and it will speedily kill or expel

Indelible Ink for marking Linen .- In four ources of rain water, dissolve four drams of lunar caustic; Dissolve one dram of pearl ash, and one drachm of gum Arabic in one gill of rain water, with which wet

Swelling .- To scatter sw llings on horses or other cattle, take two quarts of proof whiskey, or other dissolve i : it a pint of soft soap - when cool put it in a bottle and add o e ounce of camphor. When dissolved it will form the liquid prdeldoc, and is then ready for application, forming a cheap and useful re-medy. When the swelling is on the leg, or any part that will receive a bandage, such bandage should be applied, and wet with opedeldoc.

Cure for a Burn .- Scrape the inside of a potatoe; mix sweet oil and turpentine so as to make poultice of the mixture, and apply it to the burn immediately;

glect to strip it off. Brother farmers, just try Cure for the Sting of a Wasp .- A little boy was stu g severely, and was in great torture, until an onion was applied to the part affected, when the cure

Cure for a Cough .- Take a lump of alum of the size of a hen's egg, put it into a quart of good molasses and simmer the same over the fire in an earthen vessel till the alum is dead, and when cool take a spoonful as often as you feel the cough coming on, and in a short time you will get relief.
